

Problem Set 1.1

1.

(a)

$$\therefore \begin{bmatrix} 3 \\ 6 \\ 9 \end{bmatrix} = 3 \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}, \quad \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix} = 1 \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix} \quad \therefore \begin{bmatrix} 3 \\ 6 \\ 9 \end{bmatrix} \text{ and } \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix} \text{ fills a line.}$$

(b) Let $v = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$, $w = \begin{bmatrix} 0 \\ 2 \\ 3 \end{bmatrix}$, and we have all linear combinations $cv + dw$ where c and d are constants. This is the simplest form. Therefore v and w fill a plane.

(c) Let $u = \begin{bmatrix} 2 \\ 0 \\ 0 \end{bmatrix}$, $v = \begin{bmatrix} 0 \\ 2 \\ 2 \end{bmatrix}$, $w = \begin{bmatrix} 2 \\ 2 \\ 3 \end{bmatrix}$. u, v, w are 3 different vectors, so $cu + dv + ew$ is the simplest form where c, d, e are constants, and thus they fill all of R^3 .
