Exercise2.13

```
1  int i = 42;
2  int main()
3  {
4      int i = 100;
5      int j = i;
6  }
```

value of j is 100. Definition of i in main() overrides the definition outside it. Therefore, the true initial value to j is the value of i defined inside function main().
